

## **Soil Quality Enhancement Activity – SQL04 – Use of Cover Crop Mixes**

### **Louisiana Criteria**

In addition to meeting the requirements outlined in the Enhancement Activity Sheet, cover crops used must also comply with the Cover Crop (340) standard and should be selected from the attached Table-Planting rates for Louisiana by MLRA's (Conservation Stewardship Program). Field office personnel are to consider, with the producers, the growth patterns of the cover crops used, the overall crop rotation, the planting dates of the annual harvested crops, and any other applicable factors.
